

```
std::iterator< std  
::random_access_iterator  
_tag, T >
```

A diagram illustrating the relationship between two C++ iterator types. At the bottom is a gray box containing the text 'Core::RIterator< T >'. A blue arrow points vertically upwards from this box to a white box above it. The white box contains the text 'std::iterator< std::random\_access\_iterator\_tag, T >'. This indicates that 'Core::RIterator' inherits from or is a specialization of 'std::random\_access\_iterator'.

```
Core::RIterator< T >
```
